

Earl & Brown Company, Inc.

January 3, 2001

Ms. Magalie Roman Salas
Secretary, Federal Communications Commission
445 12th Street, SW
Washington, DC 20054

Subject: WT Docket No. 98-182: Creation of MURS Service

Dear Ms. Salas:

Earl & Brown Company would like to file these comments supporting the Petition for Reconsideration filed by Motorola that argues that the MURS service would cause harmful interference to business and industrial users of the "color dot" frequencies.

- We are a distributor of Two-2 Handheld radio products servicing 8 western states
- We distribute over 30,000 radios per year to all types of resellers servicing industrial, retail, and commercial end-users. These radios are used to improve employee efficiency and enhance employee safety
- All of these end-users purchased these products expecting limited amount interference from other business users on the same frequency
- We see a considerable amount of additional interference if CB and FRS users start encroaching upon business and industrial users. It will render the product nearly useless by the commercial user.

We urge you to reconsider your proposed rule change.

Best regards,

Larry H. Brown
